Your vision and the rundown on 'digital detox'

It may not involve food or drink, but the latest detoxification trend sweeping the globe does involve something most of us consume in excess – and it hits us square in the eyes.

It's called digital detox, and some may think of it as the ultimate luxury. More people, seeking to reclaim a life balance, are taking a break from digital devices for reasons that range from distraction-free family time to improved eye health.

How to choose an eye doctor

It may be human nature to surround ourselves with people who see things the way we do. But we should also include a few who see things a little differently. This applies especially to your eye doctor. The person you choose to provide your annual eye exam should be as much an ally as an expert. Above all, he or she should be able to tell you what you need to know about your vision health.

Put Vision Safety to Work

No matter what you do, protecting your eyes is an important part of your job.

No matter where you work—in a factory, laboratory, construction site or office—workplace eye injuries can and do occur. Every day, more than 2,000 American workers suffer an eye injury that requires medical attention.¹ And nearly a million Americans have lost some of their sight due to an eye injury.² According to the Bureau of Labor Statistics, these injuries account for more than \$300 million in lost time, medical expenses and worker compensation.³ The good news is that most workplace eye injuries are preventable. But different types of jobs call for different ways to protect your eyes. It's important to know what works best for your occupation.

It's estimated 90 percent of workplace injuries could be avoided with the proper use of safety eyewear.

When dust gets in your eyes – a to-do list for workplace vision safety

We've heard of taking the red-eye home from a business trip. But for roughly 2,000 people every day, red-eye can be a regular work floor occurrence.

That's roughly the number of U.S. workers who sustain daily job-related eye injuries that require medical attention, according to the National Institute for Occupational Safety and Health.¹ The causes of these injuries can range from flying wood chips to infections, or be as typical as dust. If you've ever had so much as an eyelash in

REST FOR THE WEARY

20-20-20 Vision Challenge

Give your tired eyes a regular break from screen time with this easy challenge. It literally takes seconds to do.

20 MINUTES
20 FEET
20 SECONDS

WHY	WHERE	HOW
To keep your eyes strong, vision experts suggest looking up from your computer every 20 minutes at something 20 feet away for 20 seconds. 20-20-20. Simple, right?	"Monitor" your screen starting by taping this tracking sheet to the side of your computer monitor—it makes a great reminder, too.	Every time you do a 20-20-20 move, just mark the sheet. When it's full, start another one. How many can you collect?

Every day, 2,000 American workers suffer an eye injury—and most of them are preventable.¹ When hazards are part of the job, it helps to know how to best protect your eyes.

Flying wood chips, infections, dust and moving objects all pose a risk to eyes at work. Explore 10 ways to keep yours safe, including what to wear and how vision benefits can help.

Low maintenance, easy to do, and motivating—everything you'd want in a workplace vision challenge. One simple concept helps you build long-term healthy vision habits at your own pace.

Men, vision health, and the big 5

Of the most common health issues faced by men, 5 can carry risk of serious harm

In living color

Most people who are considered blind have a color vision deficiency means they can see colors, but see them a little differently. Colors look faded or dull, or two different colors could look very similar. This happens because the cones in the eye have one or more of the light-sensitive pigments. Genetics are typical blame, but sometimes age, disease, or medication can be the culprit.

Myopia: Closing in on a looming vision condition

What turns leaves into green blobs, is longer than it is round and is shared by nearly half the people you know? The answer is closer than you might think.

Myopia, commonly known as nearsightedness, is the most common cause of impaired vision in people younger than 40—and its presence is growing rapidly. 42% of the U.S. population is nearsighted today, up from 25% a few decades ago.¹

By 2050, it's predicted nearly half of the global population will be myopic.² But why? Let's look into some of the easy-to-read signs and possible cause of this condition.

Understanding myopia: The long game

Nearsightedness occurs when your eyes cannot clearly see objects at a distance, such as road signs or performers on a stage. If the leaves on the trees look more like steamed spinach than crisp greens, you probably have at least a slight case of myopia.
